

Astro-Cooler® Pallet Cover & Astro-Quilt® Installation

Ideal for LTL/LCL shipments, our thermal pallet covers protect each individual pallet from harsh temperature changes.

Pallet Covers are economical and can be used for one-way shipments when climate-controlled shipment is not feasible or practical.

Our Pallet Covers can be made with the basic Astro-Cooler® foil/bubble construction or the more robust Astro-Quilt® material; the installation process is the same for both.

1. Place cover over pallet of goods.

2. We recommend using bungee cord or tape to cinch the bottom edge to prevent airflow entering from below. Alternatively, you can simply tuck the bottom edges between the pallet and your goods.

3. Pallet cover bottom option... place pallet cover bottom on top of pallet before loading.

4. Fold up bottom edge using tape or bungee cord.

5. Removal and folding for storage.
